

Informations before Braces

Dear patients, dear parents,

please notice that 1 week before your appointment for the braces, you should **not** make an appointment for a professional teeth cleaning.

The fluoridation that will be done at this appointment, will prevent the optimal adhesion for the braces !

Also we want to let you know, that during the treatment with braces, you should not let your dentist use **Air Flow**.

We will use sealer under the brackets to protect the enamel. If the sealing discolours a bit, don't let the dentist remove the discoloration with Air Flow, because then the enamel isn't adequately protected.

Many thanks for the good cooperation !
